

Electrobraze®

COTT Mark Vented - COTT Manufacturing

The **COTTMark**® warning sign and utility right of way marker system is a guaranteed, versatile, high strength, lightweight, maintenance free method for identifying and marking buried:

- Telephone Cables
- Electric Cables
- Television Cables
- Petroleum Pipelines
- Gas Pipelines
- Chemical Pipelines
- Water Pipelines
- Sewer Pipelines

FEATURES

HIGH VISIBILITY – Bright colors, cylindrical shape and variable height insures that the marker can be seen from all angles on the ground. Easily seen by air patrols. Can be internally lighted for 24 hour marking of critical locations.

VERSATILE – Can be used with Cott's Big Fink®, Little Fink®, FinkPlate® or ZapGard® as a cable termination box, electrical junction box or cathodic protection test station. Models also available for aerial marking and casing vents.

GUARANTEED – Patented graphic system molds signs directly into the **COTTMark**®. The warning sign is guaranteed not to peel or disbond for the life of the linemarker. All warning signs are custom designed for each utility or pipeline and conform to the spirit and letter of U.S. Department of Transportation Regulations 192.707 or 195.410.

STRONG AND MAINTENANCE FREE – Molded from engineering grade plastics, **COTTMark**® has twice the impact resistance of aluminum, four times the resistance of PVC yet weighs 1/8 as much as a steel post. Unlike metal signs, **COTTMark**® will not corrode, shatter or peel. The integral color never requires painting to preserve its factory appearance. Maintains complete dimensional stability from -40°F (-40°C) to +175°F (80°C). SuperFlex models available for high traffic areas.

SAFE – Non-conductive plastic drastically reduces shock hazard from induced current or short circuits. All plastic construction virtually eliminates impact damage to vehicles and people. ZapGard® test stations and junction boxes have no exposed metallic surfaces and protect against accidental contact with electrical terminals, conforms to NACE Standard RP-01-77 paragraph 4.4.4.

COLORS

Red, Orange, Green, Yellow, Blue, Black and White are standard Cott colors. Special colors to match company logos or other special requirements available by request. All colors are stabilized against ultra-violet attack and will not fade.

SIZES

Available in 2", 3", 4" and 6" nominal pipe sizes. Standard length is 6 feet. Special order lengths to 40 feet.
